

Juice

4-8 Gallons (15-30 L) per Hour

42-84 Bottles (12oz) per Hour

42-85 Bottles (350ml) per Hour

**depends greatly on produce*

Power

120V AC Single Phase Power
(adaptable plug option)

1HP Motor

Specifics

Overall Dimensions:

18in W x 25in L x 40in H
(46cm W x 64cm L x 102cm H)

Base Footprint:

15in W x 19in L x 40in H
(38cm W x 49cm L x 102cm H)

Net Weight: 210lb (95kg)

Features

Pulse Press Technology

Adequate for Nut Milks

100% Washdown

Electropolished

Stainless Steel

Made in the U.S.A.

**not suitable for fibrous produce*

The CM25

Cold Press Juice Machine

Pint sized... Gallons of action.

The CM25 allows you to press up to 8 Gal/hour of fresh, healthy cold press juice right in front of your customers (it might be messy, but they can't say it's not fresh). The CM25 is designed to stay on your countertop and is perfect for small volume juicing, or on display in a food truck or cafe. Need to move your machine around a lot? You'll need a VERY strong friend to help you or you can look at one of our wheeled options.

The CM25 lacks the individual control of the shredder and press zones that the bigger machines have but it more than makes up for it with being so conveniently small. But if your business relies solely on juice consider having a larger machine in an offsite commercial kitchen to manage the volume you'll need.

Note: not suitable for fibrous produce. Try the M75 or larger instead.

1229 Columbia Avenue, Unit C1
Riverside, California 92507 USA

All our free-standing machines include the following awesome features to help make your juicing experience even that much more awesome.

Not all of these standards apply to the CM25 or the M800 due to their already special capabilities.

ELECTRICAL MODIFIABILITY

All Juiced Rite machines are built in the US with standard electrical options, but are easily adaptable to any regional specifications. To see specific electrical standards for each machine, check out our downloadable comparison sheet. Understanding your electrical needs is important and we work with you to make sure you're set up correctly from the start.

100% WASHDOWN

Our machines are made of stainless steel and are 100% washdown ready. We choose a higher quality electropolish over standard passivation so you can rest assured your machine is finished to create incredibly safe and high quality juice. Electropolish also aids in cleanability (just use a food safe alkaline wash and acid sanitation routine) which makes machines (and juice) happy. Win win!

OWNER EMPOWERMENT

We purposefully design our machines for YOU to maintain. Why spend time finding and paying a technician when you can service the machine yourself and prevent excessive down time? We empower you to handle your own business (literally). We even offer optional Training and Set Up for all new machines at the time of delivery. Get your questions answered and feel confident you can do ALL.THE.THINGS. At the push of a button. Literally.

Updated February 2022

PRESS PULSE PROGRAM

Save time and increase your yield with our proprietary pre-programmed press cycle (say that 5 times fast). We've got science working for you to save time and energy (yay for science!). Our Press Pulse Program™ eliminates the extra work to get more juice yield- no need to wait to push buttons or stir to get more juice. Call us to learn more, and we can nerd out on all the fabulous science together (it's so fun).

ULTIMATE SPEED CONTROL

Have supreme control with the ability to customize your speed for shredding and pressing. Produce with higher water content may benefit from a slower press to increase yield, and with speed control, you have the power to test that. Many specialty juicers have found significant benefit to their nut milk and wine production (among others!) with controlling the speed throughout their pressing process.

ACCESSORIES FOR EVERYONE!

All the things you need to get started juicing right out of the box (or shrink wrap!). Each machine comes with a full set of press bags, three blade types that work with a variety of produce, exclusive wave boards that interlock to create an irregular surface area to maximize yield, and a shredder skirt to minimize the mess (juicing will always be messy but we can help make it a little less!). Get set up and get juicing!

SAFETY COMES FIRST

Safety is a top concern when you're using super fast, super sharp blades and powerful hydraulics. Thankfully, our machines have integrated safety locks on our shredder system and emergency stops that automatically shut down and open the machine when disconnected or pressed. We've also included safety guarding where possible and each danger zone is clearly labeled.
